

"COPD":

Chronic Obstructive Pulmonary Disease (COPD) is a chronic inflammatory lung disease that causes obstructed airflow from the lungs. It is characterized by persistent respiratory symptoms and airflow limitation.

Causes / Risk Factors:

- Long-term exposure to tobacco smoke
- Air pollution and chemical fumes
- Genetic factors (e.g., alpha-1 antitrypsin deficiency)

Symptoms:

- Shortness of breath
- Chronic cough
- Wheezing
- Excess mucus production
- Fatigue

Diagnosis:

- Spirometry (lung function test)
- Chest X-ray or CT scan
- Blood tests (to check oxygen levels)

Treatment / Management:

- Medications: bronchodilators, corticosteroids
- Pulmonary rehabilitation
- Oxygen therapy for advanced cases
- Lifestyle changes: quit smoking, exercise

Prevention:

- Avoid smoking and second-hand smoke
- Reduce exposure to pollutants
- Regular health checkups

""",

"Diabetes": ""

Diabetes Mellitus is a group of metabolic disorders characterized by high blood sugar (hyperglycemia) over a prolonged period due to insulin deficiency or resistance.

Causes / Risk Factors:

- Type 1: autoimmune destruction of insulin-producing cells
- Type 2: obesity, sedentary lifestyle, genetics
- Gestational diabetes: pregnancy-related hormonal changes

Symptoms:

- Frequent urination
- Excessive thirst
- Extreme hunger
- Fatigue
- Blurred vision
- Slow-healing wounds

Diagnosis:

- Fasting blood glucose
- Oral glucose tolerance test
- HbA1c test

Treatment / Management:

- Lifestyle: healthy diet, regular exercise
- Medications: insulin therapy, metformin
- Blood sugar monitoring
- Education and self-care

Prevention:

- Maintain healthy weight
- Exercise regularly
- Balanced diet
- Regular checkups

""",

"Hypertension": ""

Hypertension (High Blood Pressure) is a chronic medical condition in which the blood pressure in the arteries is persistently elevated.

Causes / Risk Factors:

- Obesity
- Excess salt intake
- Sedentary lifestyle
- Stress
- Genetic predisposition
- Alcohol and tobacco use

Symptoms:

- Often asymptomatic ("silent killer")
- Headaches
- Shortness of breath
- Nosebleeds in severe cases

Diagnosis:

- Blood pressure measurement using sphygmomanometer

- Multiple readings over time

Treatment / Management:

- Lifestyle: reduce salt, exercise, weight management
- Medications: ACE inhibitors, beta-blockers, diuretics
- Regular monitoring

Prevention:

- Healthy diet (low salt, high fruits/vegetables)
- Regular physical activity
- Avoid smoking and excessive alcohol
- Stress management

""",

"Asthma":

Asthma is a chronic inflammatory disease of the airways characterized by variable and recurring symptoms, airflow obstruction, and bronchospasm.

Causes / Risk Factors:

- Allergens (dust, pollen, pet dander)
- Air pollution
- Respiratory infections
- Family history of asthma
- Exercise-induced

Symptoms:

- Wheezing
- Shortness of breath
- Chest tightness
- Coughing (especially at night or early morning)

Diagnosis:

- Pulmonary function tests (spirometry)
- Peak flow measurement
- Allergy testing

Treatment / Management:

- Quick-relief inhalers (bronchodilators)
- Long-term control medications (inhaled corticosteroids)
- Avoid triggers
- Asthma action plan for monitoring

Prevention:

- Avoid allergens and triggers
- Vaccinations to prevent respiratory infections
- Regular monitoring and adherence to medications
